

Kaltura Video Tool for Sakai - Shaping the Future of Media in Education

With the rapid rise of media adoption in higher education, institutions require comprehensive and user-friendly tools to incorporate video into their Learning Management Systems (LMS). Kaltura provides the first and only Open Source Video Platform for education, including pre-integrated video extensions for Learning Management Systems.

Designed in partnership with leading universities, the **Kaltura Video Tool for Sakai** provides Sakai users with a full video solution that, once installed, is **completely pre-integrated** into the Sakai system and workflows. The Kaltura Video Tool, which is built on Kaltura's market-leading Open Source Online Video Platform, includes the ability for users to upload, catalog, edit, share, and publish video and related content within Sakai.

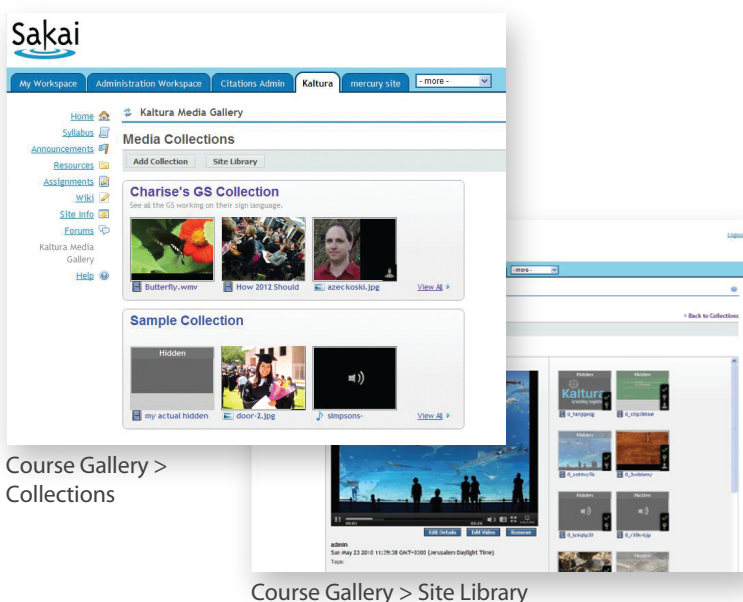

Main Features and Tools

The **Kaltura Media Gallery (KMG)** appears as a menu item called "Media Gallery" in the left hand sidebar of the default Sakai interface. The tool is available to users once they select a course inside Sakai. The tool allows users to search and browse a course's collection of visible media in order to manage and play the content. Users can select viewable content from the KMG's Site Library and create topic-based collections of content with their own viewing permissions.

Faculty/Admins can change permissions so that the content is:

- 🌈 Viewable by course/site members in the Media Gallery
- 🌈 Shared by course/site members, other members can re-use this content item in other contexts where they add media (e.g., Course, Forum, Wiki, Assignments).
- 🌈 Remixable by course/site members thus creating a collaborative video via the Kaltura Advanced Editor

Why Use the Kaltura Video Platform with Your LMS?

- 🌈 **Streamline video management:** Rather than relying on central media and LMS teams, allow students and faculty to upload and manage media independently.
- 🌈 **Extend your LMS with video capabilities:** Enable students and faculty to experience video as they would documents and other course objects.
- 🌈 **Ensure top quality media delivery and protect LMS performance:** With Kaltura's tier 1 hosting, and CDN, give students a high quality viewing experience and prevent your LMS from stalling under the weight of video files.

The **Kaltura Dynamic Player (KDP)** is a flexible and skinnable media player for media objects. The player appears inline on the screen wherever content is added via the Contribution Wizard. Users can configure the look & feel as well as specific functionality of the different instances of the Kaltura Player.

The **Kaltura Contribution Wizard (KCW)** for the ingestion of rich media content: videos, photos and audio files, from the user's desktop or from previously added content via Kaltura (cross-courses). The KCW appears in the Media Gallery and anywhere in the course where the rich-text editor appears (Forum, Wiki, Assignment, Announcements, etc.).

The **Kaltura Advanced Editor (KAE)** appears in cases when content can be edited: if content author views the video or if content is flagged as remixable. The KAE is a full-featured video timeline-based video editor, allowing users to trim, remix, manipulate content and much more.
